

Important Asset Paths:

Use case:	Where to find it:	Comments:
Translations	Assets/Generated/Resources/Translations/Global/	To translate new additions for the other languages, copy en_us.json.json to the LanguageTranslation folder that is in the DevAssets folder of the root folder of the project (This is not in the Assets folder nor seen in Unity) and then run Translate_Windows.bat – Python needs to be installed for this.
The scene asset definition	Assets/Game/World/Resources/Definitions/Scene/	This can be used to tell the scene which additive scene to use (party decorations) and the Resource.Load key for the Audio prefab.
Playing or testing the game within	Assets/Game/Core/Scenes/Boot.unity	Can be used to play and test the

the Unity editor		game within the Unity Editor without needing to build the client. Note: The editor and build uses different save paths.
The definition that tells the game about Scheduled Event Dates	Assets/Generated/Resources/ScheduledEventDates.asset	Assets/Game/Resources/Definitions/ScheduledEventDates/ This is where the scheduled event dates are stored.
The definition that tells the game about the igloo decorations	Assets/Generated/Resources/Decorations.asset	Assets/Game/Resources/Definitions/Decorations/ This is where the Igloo decorations definitions are stored.
The definition that tells the game about the igloo music tracks	Assets/Generated/Resources/MusicTracks.asset	Assets/Game/Resources/Definitions/MusicTracks/ This is where the igloo music tracks definitions are stored at and this is where the igloo music prefabs are stored Assets/Game/Audio/Resources/Audio/Ig

		loo/Music/ When adding new Tracks, make sure to open that folder in explorer and open the prefab with NotePad++. In NotePad++, search for “Play/” and replace the “Play/SomeName” with the Internal name that you sat in the definition asset.
The definition that tells the game about the avatar colors	Assets/Generated/Resources/Avatar/AvatarColors.asset	Assets/Game/Avatar/Resources/Definitions/ This is where the avatar colors definitions are stored.
Adding new clothes – 5 step process	Assets/Generated/Resources/Equipment/Templates.asset Assets/Game/Avatar/Resources/Definitions/equipmentList.asset	Step 1: Create the Equipment assets at Assets/Game/ItemCustomizer/Resources/Definitions/Equipment/ Step 2: Create the Template asset at Assets/Game/ItemCustomizer/Resources/Definitions/Equipment/TemplateDefin

		itions/ Step 3: Add the created template to the Templates.asset Step 4: Add the Equipment name to the equipmentList.asset with the correct part number. Compare the others to see how they work. Step 4: Regenerate the Client Side Content Manifest.
Rewards and rewards themes	Assets/Generated/Resources/ Rewards/ ClaimableReward.asset Assets/Generated/Resources/RewardTheme.asset	The Reward themes definitions are stored at Assets/Game/Rewards/Resources/Definitions/RewardTheme/ The Rewards definitions are stored at Assets/Game/Rewards/Resources/Definitions/ClaimableReward/
This is where the Igloo lots, structures, and furniture FBX models, textures, and materials are	Assets/Modules/Igloo/ SourceAssets/	N/A

located at		
Igloo furniture icons and prefabs	Assets/Modules/Igloo/AssetBundles/Furniture/	This is where the prefabs and icons for the igloo furniture are stored at.
Scenes	Assets/Game/World/Scenes/	This is where you will find the scenes.
Events and parties	Assets/Game/World/Scenes/Events/	This is where the party additive scenes, models, materials, and textures go.
Level up definitions	Assets/Game/Progression/Resouces/Definitions/ProgressionUnlock/	The folder which holds the definitions for progression. If you modify one of the existing definitions, you do not need to regenerate the client manifest. A couple of examples: ProgressionUnlock_10 = Level 10 ProgressionUnlock_0 = Level 0
